**Subject:** bills, etc.

Hi Brian.

How are you? Hope you're enjoying your summer with your little one! All's well here but just too busy as always☺ That said, I wanted to touch base on a few things.

First, I'm going to be working on putting together the bills for OU1 and OU2 (Phase 2 removal) this week. It looks like OU1 will be roughly \$28.3K plus its share of OU0 and OU2 will be roughly \$300K plus its share of OU0. As you may or may not be aware, I had an issue with the staff person who sends the bills out last year and they ended up being so far delayed that we made the decision to lump last year's bills in with this year's. Hence, the slightly larger bills than normal. As soon as I have figured out the final amounts and have a guess as to when these will go out, I'll confirm that with you.

Next, I don't know whether I'll need it or not, but just giving you the head's up that I've been asked to organize a tour of Newark for the Inspector General. He's coming to town (I gather he comes up every August or September for an informal visit) and he wants to hear about some of the great work happening in Newark. I figured we'd either stop at the site or do a drive by to talk about our Superfund work before we head over to Riverfront Park and talk about some of the Making a Visible Difference in Newark work. Most likely it will be August 16<sup>th</sup>. My leaning is to just drive by or stop right outside of the gate rather than physically bring him on site, but just wondering if there are any goings-on I should be aware of in making my plans?

Also, I know we talked about the possibility of solar someday. Have to admit I haven't done any research into that and I don't know whether that would even be in the scope of things you could look at given the present circumstances, but I saw this write-up for a webinar on a very different kind of Superfund site reuse which I thought sounded interesting and so I'm sharing:

**Protecting Pollinators through Sustainable Superfund Reuse - September 8, 2016, 2:00PM-3:30PM EDT (18:00-19:30 GMT).** In recent years, declines in pollinator populations and honey bees in particular, have raised concerns about the impacts to agricultural supply and ecosystem sustainability. EPA has engaged in a federal partnership with the United States Department of Agriculture to minimize impacts of pesticides on pollinator populations. But EPA has also engaged with organizations such as the Pollinator Partnership to support the development and maintenance of pollinator habitat. This webinar will highlight the opportunities presented to support pollinators through sustainable and conscientious reuse of

Superfund sites and other blighted properties. Speakers will share case study examples of pollinator habitat on contaminated sites, as well as some available resources to aid in supporting pollinators at a site near you. For more information and to register, see <http://www.itrcweb.org> or <http://clu-in.org/live>.

Think that's it for now. Hope to get back to you with more soon.

Thanks,

Elizabeth
